AMENDMENTS TO THE CLAIMS

This listing of claims replaces all prior versions of claims in the application.

1. (Currently amended): A polishing pad comprising a fiber including organic fiber and a matrix resin holding the fiber, wherein

the polishing pad contains an organic fiber in an amount of 1 to 50 wt %,

at least the organic fiber is exposed on the work material-side surface thereof and wherein the matrix resin contains at least one thermoplastic resin.

2. (Currently amended): A polishing pad comprising a fiber including organic fiber and a matrix resin holding the fiber, wherein

the polishing pad contains an organic fiber in an amount of 1 to 50 wt %,

at least the organic fiber is exposed on the work material-side surface after dressing treatment and wherein

the matrix resin contains at least one thermoplastic resin.

- 3. Cancelled.
- 4. (Previously Presented): The Polishing pad according to claim 1 or 2, wherein the matrix resin is a semicrystalline thermoplastic resin.
- 5. (Previously Presented): The polishing pad according to claim 1 or 2, wherein an elastomer is dispersed in the matrix resin.
- 6. (Original): The polishing pad according to claim 5, wherein the elastomer has a glass transition point of 0°C or less.

Amendment Under 37 C.F.R. §1.111 Application No. 10/551,457 Attorney Docket No. 053197

- 7. (Previously Presented): The polishing pad according to claim 1 or 2, wherein the fiber is an aromatic polyamide.
 - 8. Cancelled.
- 9. (Previously Presented): The polishing pad according to claim 1 or 2, wherein the organic fiber has a diameter of 1 mm or less.
- 10. (Previously Presented): The polishing pad according to claim 1 or 2, wherein the organic fiber has a length of 1 cm or less.
- 11. (Previously Presented): The polishing pad according to claim 1 or 2, wherein polishing particles are held by the organic fiber exposed on the work material-side surface.
- 12. (Previously Presented): The polishing pad according to claim 1 or 2, wherein the maximum length of the exposed organic fiber is 0.1 mm or less.
- 13. (Original): The polishing pad according to Claim 12, wherein the exposed organic fiber is a polyester fiber.
- 14. (Previously Presented): The polishing pad according to Claim 12, wherein a chopped polyester fiber is dispersed in the matrix resin.
- 15. (Previously Presented): The polishing pad according to Claim 12, wherein a polyester nonwoven fabric is laminated in the matrix resin.
- 16. (Previously Presented): The polishing pad according to claim 1 or 2 that is capable of optical detection of the polishing end point during polishing of the work material surface, wherein the polishing pad contains a substantially non-foam matrix resin containing an organic

Attorney Docket No. 053197

fiber in an amount of 1 to 20 wt %, has the functions of transporting and retaining polishing

slurry particles, and allows transmission of a light having a wavelength in the range of 190 to

3,500 nm.

17. (Previously Presented): The polishing pad according to claim 1 or 2 that is capable

of optical detection of the polishing end point during polishing of the work material surface,

wherein the polishing pad contains a region transmitting a light having a wavelength in the range

of 190 to 3,500 nm that is made of a substantially non-foam matrix resin containing an organic

fiber in an amount of 1 to 20 wt % and has the functions of transporting and retaining polishing

slurry particles.

18. (Previously Presented): The polishing pad according to Claim 16, wherein the

organic fiber is an aramide fiber.

19. (Currently amended): A method for producing the [[a]] polishing pad according to

<u>claim 1 or 2</u> for use as attached to a polishing table for flattening a work material's polishing

plane, comprising a step of obtaining a mixture of a fiber including organic fiber and a matrix

composition containing a thermoplastic resin by blending, a step of pelletizing or tabletizing the

mixture, and a step of molding the pellet or tablet into a plate or a sheet shape by extrusion or

injection molding.

20. (Currently amended): A method for producing the [[a]] polishing pad according to

claim 1 or 2 for use as attached to a polishing table for flattening a work material's polishing

plane, comprising a step of impregnating a fibrous base material containing organic fiber with a

Attorney Docket No. 053197

matrix resin composition to form a fibrous resin-impregnated sheet-shaped base material and a step of laminating fibrous sheet-shaped base materials including the fibrous resin-impregnated sheet-shaped base material and molding the laminate with heating and pressure.

- 21. (Currently amended): The method for producing a polishing pad according to claim 19 or 20, further including a step of exposing the fiber on the surface.
- 22. (Previously Presented): A polishing method for polishing a work material's polishing plane, comprising polishing a work material pressing the polishing plane of the work material to the organic fiber-exposed face of the polishing pad according to claim 1 or 2, and sliding the work material and the pad relatively while supplying a polishing slurry between the work material's polishing plane and the polishing pad.
- 23. (Original): The polishing method for polishing a work material's polishing plane according to Claim 22, wherein the work material polishing plane is a laminate of a conductor layer as well as a copper layer formed on an insulation layer having a dielectric constant of 2.7 or less on which wiring and trenches are found.
- 24. (Previously Presented): A polishing method for detecting the polishing end point optically by using the polishing pad according to claim 16.
- 25. (New): The method for producing a polishing pad according to claim 20, further including a step of exposing the fiber on the surface.
